

FOR IMMEDIATE RELEASE:

Atrix International Reveals New Battery Powered Vacuum

Burnsville, MN, August 26, 2011—Atrix International, Inc., a premier manufacturing company, introduces the newly modified Omega Series vacuum. The newest battery powered feature allows users more convenience.

This battery operated Omega Series vacuum can be used in confined areas where corded electric vacuums are not a viable option. Users are also granted freedom to clean anywhere such as on scaffolding, entry ways or in stairwells. Atrix International specially crafted this vacuum to accommodate any cleaning situation.

The Omega Series vacuum offers three convenient filter options: 1) The standard filter, which is optimal for removing dust, dirt, and other non-hazardous particulate; 2) The HEPA filter, which is ideal for disposing of lead dust, rodent feces, and other hazardous waste; 3) And the ULPA filter, which is the recommended selection for filtering the finest particles in laboratories, research labs, and bio-med applications.

This powerful and portable industrial vacuum comes with a rechargeable 40V Lithium Ion battery pack, backpack harness, battery charger, and other various accessories and vacuum wands. The battery will provide power for up to 65 minutes of continuous run time. Additional batteries can be purchased to provide power while the original battery is being recharged. The New Green Supreme battery powered vacuum is very quiet, less than 68 dB.

Atrix International is a full-line manufacturer of fine particulate vacuum products, including HEPA and ULPA filters for the field service, electronics, remediation, abatement and pest management industries. Atrix vacuums and filters are available via a network of authorized distributors.
